### Create a Computer

My computer will be as slim and sleek as it can be. It will be portable (laptop) and blue (no reason, it's just my favorite color) with a 17" screen. It will contain the 2<sup>nd</sup> generation Intel Core i7-2600 processor because it has: four or eight-way multitask processing; stunning, built-in visuals; extra performance on demand, and higher frequency, larger cache for serious multitasking (Intel Corporation). It will have 3 GB of RAM so Windows 7, Internet Explorer 8, iTunes, and Microsoft Word programs can run sufficiently. My computer's hard drive capacity will be 1 TB because it is a good amount of space. Since it is a laptop it will have wireless capabilities and an Ethernet port so it can hook up to a network if there is no Wi-Fi. It also will not come with a mouse but it will have a touch pad and it will have QWERTY keyboard. My computer will come with a built in webcam and speakers because they are standard in most laptops now.
